

Whew, Another Problem Solved!

Next time you are confronted with the dreaded collapsing wire spool, just take a tip from Photo of the Week #289 ("Jackstand-Wise, a New Low"). The solution: a lawn chair.

What better to prop up a couple tons of wire? Think about it. These chairs are cheap, ubiquitous, and available in a variety of styles and colors at your nearest home store.

They are somewhat flexible, as you can see, but don't let that fool you. That cheap plastic is incredibly strong. If it can hold up a car, it can support anything.
